Parameter "Automatic" berarti bahwa simbol grafik yang aktif akan diatur di bidang ini, Parameter "Last Used" - simbol dari operasi perdagangan terbaru. Jika "Last Used" dipilih, nilai deviasi dari posisi yang dibuka sebelumnya akan secara otomatis diatur di jendela pembukaan pesanan.
- **Stop levels** — pengaturan untuk level *Stop Loss* dan *Take Profit* yang akan ditambahkan saat melakukan pemesanan atau mengubah posisi. Jika varian "*in points*" dipilih, level *Stop order* akan ditentukan dalam jumlah poin dari harga penempatan pesanan. Jika varian "*in prices*" dipilih, maka Anda harus menentukan harga tertentu untuk *stop level* Anda/
- **One click trading** — untuk menggunakan opsi ini, Anda harus menerima syarat dan ketentuan khusus. Opsi *one click trading* memungkinkan melakukan operasi perdagangan dalam satu klik tanpa konfirmasi tambahan oleh pedagang (dialog perdagangan tidak ditampilkan). Fitur *one click trading* diterapkan di bagian platform berikut:

Harga untuk *stop order* diatur sesuai dengan lokasi kursor saat ini pada skala harga grafik. Bergantung pada harga buka posisi dan arahnya, perintah yang sesuai untuk menempatkan *Stop Loss* atau *Take Profit* akan muncul di menu.

Perintah tersebut membuka jendela modifikasi pesanan, di mana harga dapat disesuaikan secara manual.

Menutup Posisi Perdagangan

Untuk mendapatkan keuntungan dari selisih nilai tukar, posisi yang terbuka perlu ditutup. Untuk menutup posisi, operasi perdagangan yang berlawanan dengan yang pertama dijalankan. Misalnya, jika operasi perdagangan pertama membeli satu lot XAUUSD, satu lot sekuritas yang sama harus dijual untuk menutup posisi.

Untuk menutup seluruh posisi, klik dua kali di atasnya atau gunakan perintah "*Close Position*" di menu konteksnya pada tab "*Trade*"

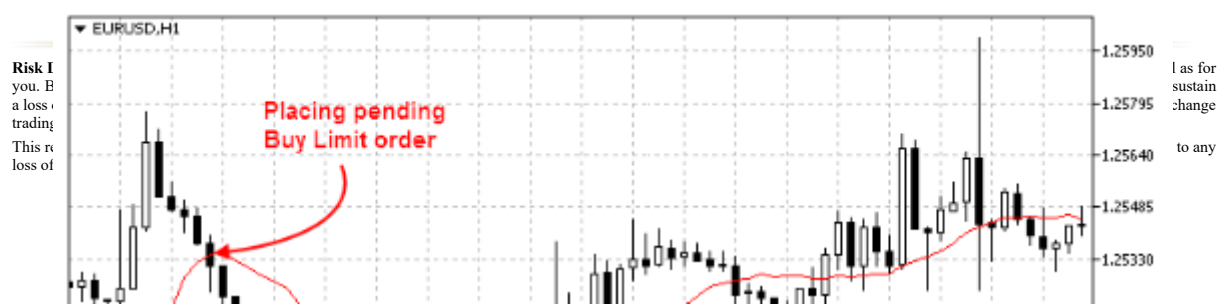

Setelah mengklik "*Close ...*", posisi secara instan akan ditutup.

Menempatkan *Limit Order*

Limit order ditempatkan dengan ekspektasi harga akan "berbalik". Trader mengharapkan harga mencapai level tertentu, misalnya support atau resistance, lalu bergerak ke arah yang berlawanan.

Order ini dieksekusi di harga yang telah dipesan atau di harga yang lebih baik dari itu. Karenanya, tidak terjadi selip selama eksekusi order. Sisi negatif dari order ini adalah bahwa eksekusi tidak dijamin, karena broker dapat menolak order jika harga bergerak terlalu jauh ke arah yang berlawanan.

Berikut adalah bagaimana kita dapat menempatkan order Buy Limit.

Dalam contoh ini, harga berada pada level 1,25350, dan pedagang menempatkan *limit order* untuk membeli pada harga 1,24620 dengan harapan harga akan mencapai level *support* 1,24453 dan akan berbalik ke atas.

Ini kebalikan dari order Sell Limit. Order ini ditempatkan untuk mengantisipasi bahwa harga akan naik ke level tertentu dan akan berbalik turun

Menempatkan Stop Order

Stop order ditempatkan dengan harapan harga akan menembus level harga yang. Trader mengharapkan harga mencapai level tertentu, menerobosnya, dan bergerak searah. Pedagang berasumsi bahwa pasar telah berbalik, setelah mencapai level *support* atau *resistance*.

Ketika order tersebut terpicu, permintaan untuk mengeksekusi order di harga pasar yang sesuai dikirim ke broker. Order dapat dieksekusi pada harga yang sama dengan yang ditentukan atau lebih buruk dari itu. Dengan kata lain, jika harga pasar berlawanan, order akan diisi dengan slippage. Namun, tidak seperti limit order, eksekusi stop order dijamin.

Dalam contoh ini, harga berada pada level 1,28190, dan pedagang menempatkan *stop order* untuk memesan transaksi *sell* pada harga 1,27600 dengan asumsi bahwa pasar telah berbalik arah pada level 1,28260 dan akan bergerak ke bawah.

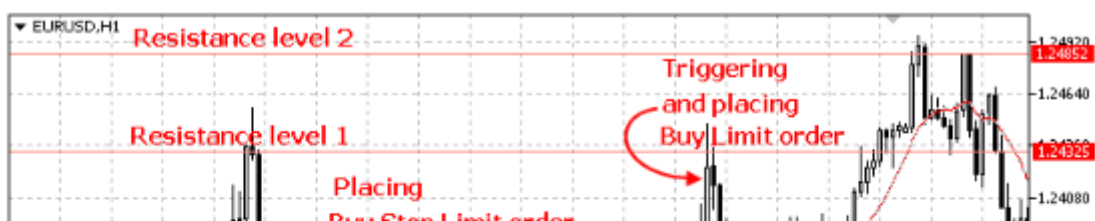

Ini kebalikan dari order Buy Stop. Mereka ditempatkan dengan asumsi bahwa pasar telah berbalik, dan harga akan naik

Menempatkan *Stop Limit Orders*

Ini adalah kombinasi dari stop dan limit order. Jika harga mencapai harga *stop*, limit order ditempatkan. Jenis pesanan ini digunakan ketika seorang pedagang ingin menetapkan perintah berhenti dan membatasi selip.

Dalam contoh di bawah ini, order stop-limit ditempatkan dengan ekspektasi bahwa harga akan mencapai level resistance 1, akan mundur darinya, dan kemudian akan naik ke level resistance 2.
